Qalyubia, Egypt

Summary

Frontend Developer and **Founder** of **SporGo**, a sports management SaaS platform. Proven experience in building responsive, scalable web applications using React.js and TypeScript. Passionate about both product development and technical community building, actively sharing programming insights as a technical **content creator**. Strong focus on delivering user-centric solutions and clean, maintainable architecture.

Work Experience

Frontend Developer

Jun 2025 - Dec 2025

[XJaffan](#) | Germany (Remotely)

- Contributed to 3 production-level projects as a Frontend Developer at XJaffan startup, using React.js and modern web technologies. Delivered responsive UIs, collaborated in Agile teams, and implemented scalable components under tight deadlines.
- Collaborated with a remote Agile team using Git and Trello over a 4-week sprint
- Designed 10+ responsive pages using CSS Grid, Flexbox, and SASS, tested across 5 screen sizes.
- Reduced initial page load time by ~25% through component optimization and lazy loading.

Projects

SporGo – Sports Facility Management SaaS (React Native – CSS – Zustand – React Query - Supabase)

- Developed 3 distinct role-based dashboards (Super Admin, Academy Manager, End-user) capable of seamlessly rendering 100+ dynamic daily time-slots and schedules.
- Built a custom booking engine UI with dynamic time-slot generation, resolving 15+ complex scheduling edge cases (e.g., time overlaps, role restrictions, and recurring bookings).
- Optimized complex state management using Redux Toolkit, improving data synchronization across components and reducing dashboard initial load time by ~35%.

Masar – AI-Powered Freelancing Marketplace (React.js – TailwindCSS – Redux Toolkit – Node.js)

- Built the frontend architecture for an AI-driven marketplace tailored for the MENA region, integrating complex state management for real-time AI user-to-service matching.
- Executed rigorous HCI (Human-Computer Interaction) testing phases on the prototype, optimizing UI/UX workflows which improved user task completion rates by an estimated 30%.

Skoonty – School ERP System (React.js– Bootstrap – Redux Toolkit – React Query)

- Implemented robust state management and complex client-side validation for dynamic forms containing 20+ interconnected input fields, ensuring high data integrity
- Streamlined the presentation of complex educational records and administrative data, focusing on an intuitive UX that reduces data-entry errors through real-time feedback

Core Skills

Frontend: React.js, Next.js, TypeScript, Redux Toolkit, React Native, Zustand

Styling: TailwindCSS, SASS, Bootstrap, CSS3

Backend & DB: Firebase, Supabase, SQL, PHP

Tools & Platforms: Git, GitHub, Vite, XAMPP

Education

Banha University Aug 2022 - Aug 2026

Bachelor of Computer Science | GPA: 3.5

Activities: Scientific Member at IEEE BUB 2023 – 2025
